

Microbiology laboratory

Mission:

This laboratory is one of the basic laboratories for students of the College of Nursing, as it helps the student to know the material of microbiology in terms of a scientific process, helping him to identify pathogens from various microscopic neighborhoods such as bacteria, parasites, fungi, viruses, and others.

Vision:

Helping a student of the College of Nursing in identifying and benefiting microbiology in the nursing work.

Definition of students to the most important recent developments that occur to microscopic biology in terms of modern techniques in the diagnosis and identification of treatment diseases caused by these microscopic neighborhoods.

Giving a clear idea to the student about the most important modern technologies in the field of sterilization and disinfection and the use of the correct scientific method in this field to reduce and prevent diseases caused by microscopic neighborhoods in the recovers and departments of health institutions.

Objectives:

Building scientific pillars for the student of the College of Nursing regarding microbiology in its various branches.

Calling a clear idea for students about the most important microscopic neighborhoods (bacteria, parasites, etc.) that causes pathogens, identify their life courses, methods of diagnosing, treating, preventing and controlling them.
