

Brief introduction to the department:

Like other medical departments, the Basic Sciences Department at the College of Nursing

teaches courses in various basic sciences to build a solid scientific foundation for college students. During the first and second academic years, the department teaches various scientific subjects including anatomy and histology, biochemistry, nutrition, microbiology (1,2), pathophysiology, and pharmacology.

The aim is to impart knowledge to students to such an extent that they are able to link different sciences together in the service of nursing and health sciences, keeping pace with scientific and technological advances in the use of medical technologies in conducting examinations and analytical tests in the diagnosis of various diseases and methods of treatment, to enhance students' confidence in taking responsibility and increase their awareness in developing the ability to analyze and give scientific and logical explanations for the medical cases they encounter in all health institutions

. Among college and university students

Aspiring to establish scientific links locally and globally with other health institutions,

the Basic Sciences Department represents the cornerstone for nursing college students, as it is relied upon to enable students to study and understand the various basic medical sciences that the department is interested in and which fall within its tasks .

The department aims to establish a solid scientific foundation for college students in the various specializations of the department

In addition to introducing students to the basic medical sciences that form the foundation for their nursing studies, the department also introduces students to the necessary laboratory tests, thereby increasing their scientific ability to provide better nursing care.
