

MESSAGE

The mission of the branch is to establish students with a solid foundation in the basic concepts, principles, and theories of nursing. We develop their basic clinical skills and critical thinking, and instill the values of care (patient-centered), compassion, integrity, and professional responsibility, in preparation for safe and effective practice in various health settings

VISION

To be the cornerstone of building the nurse of the future, by instilling the foundations of the profession and its noble values, and contributing to the graduation of nursing cadres with high scientific, skillful and ethical competence, to be the starting point towards excellence in various nursing specialties.

OBJECTIVES

1. Build a solid knowledge foundation: Provide students with a deep understanding of nursing theories, principles of allied health sciences, and professional ethics, which form the frame of reference for nursing practice.
2. Mastery of Basic Clinical Skills: Training students to master basic nursing skills (e.g., clinical examination, medication administration, wound care) in laboratories and the field, emphasizing the principles of safety, quality, and infection prevention.
3. Developing critical thinking and problem-solving ability: Developing students' ability to assess patient needs, make sound nursing decisions, and solve simple clinical problems based on evidence and scientific logic.
4. Establishing values and professionalism: Instilling values of care (patient-centered), respect, empathy, responsibility, and confidentiality as an essential part of a student's professional identity.
5. Promote effective communication: Develop students' oral and written communication skills to interact effectively with patients, their families, and the multidisciplinary health team
