

MESSAGE

Assisting nurses in preparing and implementing a nursing care plan and then evaluating the results based on scientific evidence-based nursing practices.

VISION

Enabling nurses to provide efficient nursing care to children and their parents in health institutions and developing nurses' professional skills to provide the best health care .

OBJECTIVES

1. Preparing competent pediatric nurses: Clinically qualifying the students of the branch to provide comprehensive and specialized nursing care for healthy and sick children in various health institutions (such as hospitals and clinics), with a focus on the application of self-learning and the development of clinical and practical skills.
2. Building solid scientific knowledge: Deepening students' understanding of the scientific principles of child growth and development across all age stages, to enable them to provide evidence-based care that is tailored to the developmental needs of each age group.
3. Nursing practice update: Ensure that curricula and practices keep up to date with the latest knowledge and principles in the field of pediatric nursing care, (covering) all physical, psychological, and social aspects of the child and his family.
4. Contribution to scientific knowledge: Stimulate and produce original scientific research in the fields of child health, publishing it in peer-reviewed journals to contribute to the enrichment of global knowledge and the development of local practices.
5. Knowledge transfer to the professional community: Designing and implementing specialized workshops and training programs for health institutions and staff working in the field of child health, to enhance their competencies and establish a culture of continuous professional development.
