

MESSAGE

To develop leading nursing cadres in the field of maternal and newborn care, capable of providing comprehensive, evidence-based care, while fully adhering to societal values and professional ethics. We work to provide students with the highest academic and practical standards, promote constructive scientific research, and build community partnerships to improve women's and family health.

VISION

To be the main pillar in building specialized knowledge in maternal, newborn and reproductive health, and to contribute effectively to reducing maternal and child mortality rates, and improving national health indicators, in order to establish a healthy family and a healthy Iraqi society.

OBJECTIVES

1. **Comprehensive Student Qualification:** Provides students with the in-depth knowledge and advanced clinical skills necessary to work efficiently in all areas of maternal and neonatal nursing, including preconception, antenatal care, intranatal and postnatal care, and neonatal care.
2. **Strengthening primary health care and women's health:** Qualifying graduates to provide comprehensive reproductive health and family planning services within the framework of primary health care, with a focus on health education and psychosocial support.
3. **Leadership in scientific research:** Producing solid scientific research that is applied on the ground to develop clinical practices, and contribute to solving local health problems in the field of maternal and child health.
4. **Commitment to societal values and professional ethics:** Inculcate the principles of respectful and culturally sensitive care, which respect women's dignity and rights and are commensurate with the religious and social values of Iraqi society.
5. **Contribution to health policies:** Participate in the development of national strategies and programs aimed at improving the quality of maternal and newborn health services and reducing the health risks to which they are exposed.
